

## **Am I the right photographer for you?**

My specialty is natural light, informal photography.

I will do a limited number of posed shots, but I feel that the essence of a person or event are captured when the subjects are engaged and behaving naturally.

I do not do studio work; portrait locations should be outside and/or in a building with enough natural lighting that fill flash will be sparingly used/mostly unnecessary.

Images are shot and uploaded as high resolution jpg files

### **Some things to know...**

Portraits should be shot in the morning or evening so that the light is warm and low angled. As a general rule, portraits will not be shot at mid-day (times change with the season) because the light is harsh.

You should wear clothing that YOU feel good in. When you feel good, you look good.

Simple, solid color clothing generally provides a better look than stripes or busy patterns. Most people will find that long sleeves and V necks are more flattering than other clothing styles.
